

## About Us

### Autofont Group

Autofont is the leading Israeli software producer of special and diverse technological printing and print output solutions for large organizations. Employing over 40 highly experienced professionals, Autofont's team of experts constitutes the company's core source of the strength and stability.

Autofont began in 1990, leveraging a professional background in print technology to develop Scalable Fonts for languages that were not based on the Latin alphabet (Hebrew, Arabic, Russian, Greek, as well as Asia languages) and which would be implemented in HP printers.

Autofont's prime objective is to provide organizations with a technological infrastructure that provides output production savings, security, and efficiency. In the main research facility, located Natanya, Autofont is developing print and print output solutions that streamline the print procedures within large organizations and consequently conserve the organization's resources.

Products developed by Autofont include:

- ❖ Solutions for controlling and supervising all print procedures within critical organizational systems.
- ❖ Production infrastructure merger mechanisms and organization documentation archiving and releasing solutions – based on electronic form technology.
- ❖ Unique solutions for reducing network traffic by form information storage within the printer or organization server.
- ❖ Solutions for the secure production, within the organization, of checks and payment vouchers, on smooth paper, with magnetic tuner, from a variety of book-keeping programs and in such ERP environments as SAP.
- ❖ Streamlined procedures through the use of barcode printing on various documents etc.

In Israel, Autofont, in cooperation with leading software producers and implementers, markets diverse organizational software solutions in the field of electronic forms, virtual check-production systems, pay slip and pay envelope production systems (Print2Mail), Secret Code production (Pin Paper, Pin2Mail), user information management security for printers (SafeCom), and more.

In addition to developing and marketing its software solutions, Autofont also operates a division for examining and approving printers for Interoperability with Windows Operating Systems and a subsidiary, ICSC, which serves as the Israeli support center for HP equipment (printers, personal computers, scanners, palm computers, etc).
